## Keep Your Refrigerant Under Control

Refrigeration caps were created by industry professionals after evidence of **refrigerant theft by teenagers**, many times resulting in brain damage and even death after inhaling or "huffing" refrigerant. These locking caps help prevent tampering or access by unauthorized personnel. Refrigerant locking caps are patented and precisely machined from high-grade brass encompassed within a protective refrigerant color-coded aluminum casing.

Refrigerant locking caps have an o-ring seal to provide a positive back-up for leaking service valves. These caps are secured on to a unit with a special key sold only to certified HVAC technicians and provide a tamper resistant barrier to reduce theft, **HUFFING BY KIDS**, vandalism and the accidental mixing of refrigerant.
